Quiz 2 - SQL Queries

Schema and assumptions

```
Sailors(sid, sname, rating, age)
Boats(bid, bname, color)
Reserves(sid, bid, day)
```

Primary keys: Sailors.sid, Boats.bid, and Reserves(sid, bid, day). All key columns are non-NULL. Reserves.sid and Reserves.bid reference Sailors and Boats. Each reservation is one row; day is a DATE.

The tables below are example data (Sailors = S1, Boats = B1, Reserves = R1). Queries must work for any valid data.

Reserves (R1)

sid	bid	day
22	101	1996-10-10
58	103	1996-11-12

Boats (B1)

bid	bname	color
101	tiger	red
103	lion	green
105	hero	blue

Sailors (S1)

sid	sname	rating	age
22	dustin	7	45.0
31	lubber	8	55.5
58	rusty	10	35.0

Write SQL statements to solve the following problems:

1. Find the names and IDs of sailors who reserved a boat in November (in any year). Return each qualifying sailor once.

2. Find the names and ages of sailors who have at least one reservation and have never reserved a red boat.

3. Find the names of sailors who have reserved every boat in Boats.

4. Find all information about sailors who reserved at least two different boats on the same day.

5. How to find names of sailors who have reserved boat #101 and reserved only one time?

6. Find the names and ages of sailors whose rating is greater than 7.

7. Find the names of sailors who have reserved boat #103.
